

## Sustainability Policy

Urban 360 was spun out of the University of Manchester to help deliver global urban sustainability. We are committed to helping deliver the United Nation's Sustainable Development Goals through working with clients and communities to improve urban environments and human health. Our services integrate expertise from across the physical, health and social sciences to provide joined up monitoring and evaluation solutions. In this way, we help clients deliver environmental, social and economic benefits that are sustainable in the long-term. We monitor our own carbon footprint annually and use a carbon reduction plan to drive improvement, as well as producing a sustainability report outlining how our company has performed against its mission to create healthy and happy cities around the world.

### Aims

We work with clients to:

Make cities more sustainable and resilient.

Improve urban environments to promote health and wellbeing.

Understand the social, environmental and health outcomes of sustainability interventions.

Improve rather than exacerbate inequalities.

Upskill organisations and communities in digital and sustainability.

Ensure monitoring is done in the most cost effective and sustainable way.

Reduce carbon.

### Actions

We do this by:

Making our world leading expertise in atmospheric, data and health science available to clients.

Developing long-term partnerships with our clients to address urban sustainability challenges.

Providing knowledge and skills to empower and educate our clients and communities through our training programme.

Adopting sustainability principles including a carbon reduction plan.

Working with local suppliers and contractors where possible.

Create an annual sustainability report .

### Accountability

Our sustainability policy is updated and signed off annually by the board of directors.

This policy forms part of a suite of policies designed to ensure that we meet the highest standards for sustainability performance, including our Equality Policy, Health, Safety and Welfare at Work Policy, our Carbon Reduction Plan and Modern Slavery statement.
